Name _____	Number _____	Class _____	Group _____	Career _____

**SPEED**

# TARGETS

The grade 5 English science unit, Movement of objects, meets the academic content standards set in the Korean curriculum, which state students should:

- A. Understand an object's movement as positional changes over time and understand an objects speed qualitatively by observing a moving object
- B. Be able to compare the speed of objects by measuring the time it takes for the object to move over a certain distance
- C. Be able to compare the speed of objects by measuring the distance the object moves withing a given time
- D. Be able to calculate an objects speed by measuring the distance it moves and the time required.

# SPEED

Compare	비교하다	To judge one thing in relation to another in order to see the similarities and differences.
	比較	
Dangerous	위험한	Likely to cause harm or injury; not safe; risky.
	危險	
Describe	설명하다	To tell something so that your listener gets an understanding of it.
	説明	
Distance	거리	The space between two places.
	距離	
Example	예	You use <b>For example</b> to help explain what you are saying or to show that it is true.
	例	
Kill	죽이다	To cause the death of a person, animal or living thing.
	殺す	

**SPEED**

Kilometer	킬로미터	A unit of length in the metric system equal to 1000 meters.
	キロメートル	
Measure	측정하다	To find out the size of something.
	測定	
Period	기간	A length of time.
	期	
Position	위치	The place where something is located.
	位置	
Speed	속도	The rate at which someone or something moves.
	スピード 速度	
Unit	단위	An amount used as a standard of measurement.
	單位	

Definition is  
the green star.

My sentence  
is the blue star.

# READING

Speed is the measure of distance over time. It is written as:

$$\frac{\text{Distance}}{\text{Time}} : \text{km/hr or m/s}$$

When you drive in a car, you normally move at  $\text{km/hr}$

### Distance:

Distance is the measure of how far we travel. It is written in cm, m and km

### Time:

Time is the measure of how long it takes to move somewhere. It is written in sec, min and hr.

$$\text{Time} = \frac{\text{Distance}}{\text{Speed}}$$

$$T = \frac{D}{S}$$

You can see that things move if their position changes, over a period of **time**. If something changes position every second, then that thing has a speed.

This movement can be seen even in pictures.

Take a look at the race cars on the track below ↓.

Start.

5 Seconds later.

 **SPEED**   
 **ASSIGNMENT** 

How can you describe speed?

---

Which of the 2 pictures is faster?(colour the pictures).

Racetrack 1.

Start

3 Seconds later

Racetrack 2.

Start

8 Seconds later

# ASSIGNMENT

Sanghoo is driving to school. He drives 300km and he is driving 150  $km/hr$ . How long does it take for Sanghoo to go to school

Time ?	Distance _____	Speed _____
--------	----------------	-------------

Time = Distance \_\_\_\_\_  $\div$  speed \_\_\_\_\_ = \_\_\_\_\_ hr

Hajin is running to school. She runs 1km and she is running 15  $km/hr$ . How long does it take for Hajin to go to school

Time ?	Distance _____	Speed _____
--------	----------------	-------------

Time = Distance \_\_\_\_\_  $\div$  Speed \_\_\_\_\_ = \_\_\_\_\_ hr

Benjamin is biking to school. He bikes 2km and he is biking 30  $km/hr$ . How long does it take for Benjamin to go to school

Time ?	Distance _____	Speed _____
--------	----------------	-------------

Time = Distance \_\_\_\_\_  $\div$  Speed \_\_\_\_\_ = \_\_\_\_\_ hr

Write down how fast your car drove in the given distance.

Name	Distance	Time	Speed
	5m		
	5m		
	5m		
	5m		
	5m		

Who was the fastest in your group? How fast did their car drive?

\_\_\_\_\_  $m/s$

Who was the fastest in the class? How fast did their car drive?

\_\_\_\_\_  $m/s$

Definition is

Speed is the measure of distance over time. It is written as:

$$\frac{\text{Distance}}{\text{Time}} : \text{km/hr or m/s}$$

When you drive in a car, you normally move at  $\text{km/hr}$

### Distance:

Distance is the measure of how far we travel. It is written in cm, m and km

### Time:

Time is the measure of how long it takes to move somewhere. It is written in sec, min and hr.

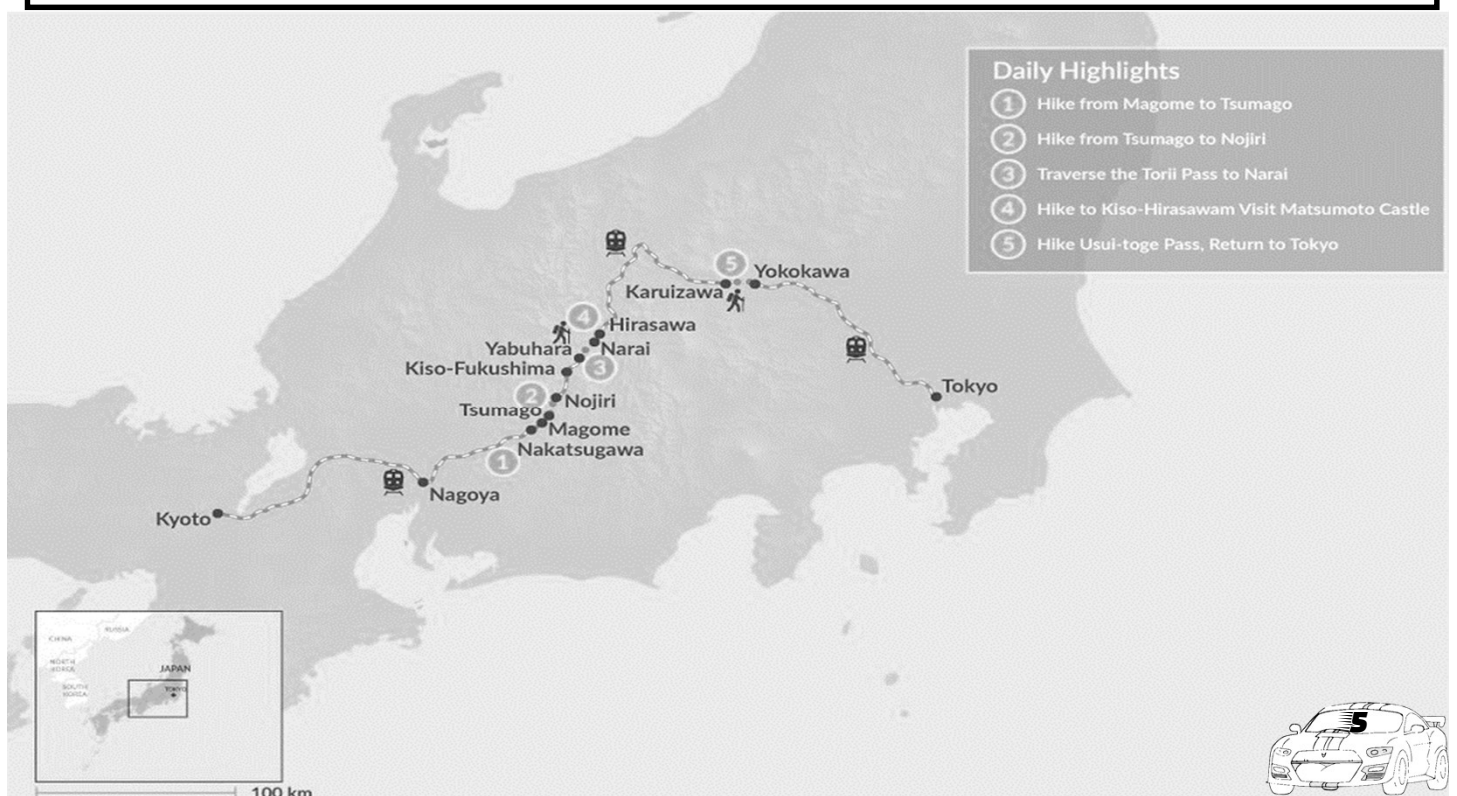

$$\text{Distance} = \text{Speed} \times \text{time}$$

$$D = S \times T$$

Distance is how far we moves. Last week we talked about something having a speed if it changed its **position** over a period of time. This week we will focus on the **Position**.

**Position** is something changing from where something was to where it is. Moving 1 kilometer, 1 meter or even 1 centimeter, means changing your position

One square is 1 square Kilometer  $1\text{km}^2$ .  
Draw a line that is 9km long

One square is 1 square meter  $1\text{m}^2$ .  
Draw a line that is 20m long

# ASSIGNMENT

Jiu is driving to school. Jiu drives for 3 hours at a speed of  $50 \text{ km/hr}$ .  
How far will Jiu get?

Distance ?	Speed _____	Time _____
------------	-------------	------------

Distance = speed \_\_\_\_\_ X time \_\_\_\_\_ = \_\_\_\_\_ km

Benjamin is biking home. He bikes for 30 minutes at a speed of  $15 \text{ km/hr}$ .  
How far will Benjamin get?

Distance ?	Speed _____	Time _____
------------	-------------	------------

Distance = speed \_\_\_\_\_ X time \_\_\_\_\_ = \_\_\_\_\_ km

Shu is running to school. Shu runs for 15 hours at a speed of  $10 \text{ km/hr}$ .  
How far will he get?

Distance ?	Speed _____	Time _____
------------	-------------	------------

Distance = speed \_\_\_\_\_ X time \_\_\_\_\_ = \_\_\_\_\_ km

## READING

Speed is the measure of distance over time. It is written as:

$$\frac{\text{Distance}}{\text{Time}} : \text{km/hr or m/s}$$

When you drive in a car, you normally move at  $\text{km/hr}$

### Distance:

Distance is the measure of how far we travel. It is written in cm, m and km

### Time:

Time is the measure of how long it takes to move somewhere. It is written in sec, min and hr.

$$\text{Distance} = \text{Speed} \times \text{time}$$

$$D = S \times T$$

Speed is the combination of distance and time. When we move over a **period of time**, we have a **speed**. That **speed** is defined by either  $\text{km/hr}$  or  $\text{m/s}$ . **Speed** is how fast we are moving. When we bike, when we run, even when we drive in a car, then we have a **speed**.

People often say, that it is the **speed** that kills. When there is an accident, the **speed** is one of the biggest reasons that the accident is dangerous.
